Redd Boxes

Depending on what type of pallets you get, create a solid corner by flipping the pallet direction and connect with 2” course screws to create a box. Redd Boxes can be placed in various configurations on the inside and outside of a building to create; hallways (90, T, 180), storage racks, residential or commercial sized halls/rooms, and short/long spans.
A pallet plug can be created to change the direction or configuration (90 or T) of the layout quickly. The top pictures are of a 90 and the bottom pictures are moving the plug to create a T.
