Bellingham, WA 98226

Cost: \$250.00 per student; includes lunches

Application Deadline: January 15, 2021

Masks and proper social distancing will be required during all classroom activities.

Synopsis: **Drilling for Function** (Friday from 1000-1600) is a class designed to discuss instructional techniques and information on how to help you be a better instructor and make your drills and training more successful. “Drilling for Function” will help you understand how firefighters learn and retain the information you are presenting in a training environment. This isn’t a lecture designed to check a box or pad your resume’ – it’s designed to help you be a better teacher.

The Nozzle Forward program (Saturday and Sunday from 0830-1730) was developed to gain more mechanical advantage and “create a system rather than a grab bag of techniques.” Nozzle Forward is a systematic study and methodology for hose line management, movement, and fire attack. Nozzle Forward skills are adapted from many sources, reconstructed around simple principles that maximize mechanical advantage.

Nozzle Forward techniques have been adopted in full or part by fire service agencies across America. The principles of hose line management taught in Nozzle Forward apply to every engine, every fire, and every firefighter.

Friday’s Drilling for Function class will be lecture only and does not require any PPE. Nozzle Forward on Saturday and Sunday will require a complete set of turnout gear. SCBAs are not required.
